Course Introduction	<p>Until the 1980s, most governments regarded global environmental problems as minor issues, marginal to their core national interests and international politics. With the rise of environmental movements in the industrialized countries and the appearance of well-publicized global environmental threats that could profoundly affect the welfare of all humankind - such as the depletion of the ozone layer or global climate change, this situation has changed. The course analyzes major political, economic and environmental trends underlying the emergence of global environmental politics.</p>
