Course Introduction

The objective of this course is to introduce the basic theory and engineering application of engineering mechanics. Through drawing free-body diagrams and solving equations, students will have the abilities to analyze and design engineering problems, to establish calculation skills, and to apply to practical engineering. This course includes force vectors, particle equilibrium, rigid body equilibrium, structural analysis, center of gravity and centroid, shear and moment, to help students build the essential academic abilities in the field of engineering.

The correspondences between the course's instructional objectives and the cognitive, affective, and psychomotor objectives.

Differentiate the various objective methods among the cognitive, affective and psychomotor domains of the course's instructional objectives.

- I. Cognitive : Emphasis upon the study of various kinds of knowledge in the cognition of the course's veracity, conception, procedures, outcomes, etc.
- II.Affective : Emphasis upon the study of various kinds of knowledge in the course's appeal, morals, attitude, conviction, values, etc.
- III.Psychomotor: Emphasis upon the study of the course's physical activity and technical manipulation.
