Course
Introduction

This course will give an introduction to linear algebra that is useful in various fields. Starting with matrix arithmetic, several topics will be covered in the lectures, including determinants, introduction of vector space, bases and dimensions, inner and outer product, similarity and diagonalization, and so on. Computer programming will be applied to this course so that students know how to make use of the computer technology as well as linear algebra to solve for engineering problems. Homework, midterm examination and final examination will be used for the evaluation.
