Course Introduction	What is logic? Logic is the study of inference and an important tool, whether deductive or inductive, for expanding knowledge. To obtain correct and useful inferential knowledge, learning logic is the most direct and efficient way! This course will systematically introduce sentential logic, which is the basis for training critical thinking and learning predicate logic, philosophy of science, and philosophy of language.		

The correspondences between the course's instructional objectives and the cognitive, affective, and psychomotor objectives.

Differentiate the various objective methods among the cognitive, affective and psychomotor domains of the course's instructional objectives.

I. Cognitive : Emphasis upon the study of various kinds of knowledge in the cognition of the course's veracity, conception, procedures, outcomes, etc.

II. Affective : Emphasis upon the study of various kinds of knowledge in the course's appeal, morals, attitude, conviction, values, etc.

III. Psychomotor: Emphasis upon the study of the course's physical activity and technical manipulation.
