Course Introduction	<p>This course serves as an introductory exploration of big data analysis. It is divided into three main sections. Firstly, we will delve into fundamental concepts of probability and statistical inference. Secondly, we will explore the practical implementation of the general linear model for data analysis. Finally, we will dive into the application of various machine learning algorithms for data analysis. Throughout the course, we will utilize R, Python, and SPSS software to facilitate our learning process.</p>
